Surface preparation is one of the most important factors for the success of Epoxy floor, So FLOOR IN company is always interested in using the best and latest types of machines that achieve this according to the requirements of the floor. All our machines use vacuum dust free for more information:- www.floor-in.com

Shot Blasting Machine

Floor shot blasting machines are robust equipment designed for efficiently cleaning, profiling, and preparing surfaces. They utilize abrasive materials propelled at high velocities to remove contaminants and create an ideal surface for coatings or overlays.

Grinding Machine

Floor grinders are machines used for surface preparation. They are most commonly used on concrete or old epoxy floor. The machine uses rotating discs to clean, polish, smooth, or preparation floor surfaces for implementing epoxy floor.

Our Machine

Scarifier Machine

Floor scarifiers, also called concrete scarifiers are powerful tools that utilise its rotating drums with hardened steel cutters to remove tough coatings, paints, and concrete from surfaces.

Single Grinding Machine

Floor grinding machines are specially designed manually controlled machines/tools for repairing damaged surfaces and leveling uneven joints in concrete floors. In addition to preparing surfaces for epoxy paints.
